Experience

Application Developer
Deuex Solutions, *Mumbai, IN*

Mar 2025 – Present

- Built backend and full-stack features for healthcare and real-time sports applications using Node.js, PostgreSQL, Redis, React, and React Native, supporting customer-facing workflows and production services.
- Optimized scoring and leaderboard systems by restructuring PostgreSQL queries and in-memory state, improving API response times by 3x and reducing processing for frequently accessed match data.
- Designed and built a real-time scoring layer using WebSockets, Redis, and paginated APIs, replacing repeated polling with targeted live updates and reducing unnecessary API traffic and response payloads.
- Built and maintained production services with caching, observability, Docker, AWS, and CI/CD workflows, improving release reliability and simplifying diagnosis of performance and production issues.

Associate Developer
Nagarro, *Gurugram, IN*

Mar 2023 – Feb 2025

- Built features for a React Native banking application and its web experience, used by 100K+ users, across core onboarding and account flows with responsive and accessible interfaces.
- Built application state and asynchronous data flows using Redux and Redux Saga, integrating REST APIs across core banking features.
- Built user-specific experiences based on account tiers and permissions, controlling the data and functionality available to different users.
- Built and maintained a test suite using Jest and React Testing Library, achieving over 90% coverage across application screens.

Projects

Flyer - Scalable Notification System
Node.js, Kafka, Redis, PostgreSQL, Docker

- Built a multi-tenant notification system that accepts notification events through an API and processes deliveries asynchronously using Kafka-based workers.
- Built retry and failure handling with dead-letter queues and idempotent processing to prevent duplicate notifications and recover from delivery failures.
- Built rate limiting and horizontally scalable workers to control tenant traffic and support higher notification throughput.

Quick Review - AI Code Review Platform
TypeScript, Node.js, PostgreSQL, Tree-sitter, LLMs

- Built an AI-powered code review platform that analyzes pull requests using context from the surrounding codebase rather than relying only on changed lines.
- Built a code graph with PostgreSQL and Tree-sitter to index functions, classes, modules, and relationships such as calls, references, and imports.
- Built context-gathering tools that traverse the code graph to retrieve related entities and files before generating LLM-based review findings.

Skills

JavaScript, TypeScript, Python, Java, Mongo db, SQL, React, React Native, Node.js, PostgreSQL, Spark, ElasticSearch, Redis, Kafka, WebSockets, AWS, Docker, Clickhouse, Graffana, Git, Jest

Education

B.Tech in Computer Science
Aug 2019 – Jul 2023

Rajiv Gandhi Proudyogiki Vishwavidyalaya
Bhopal, IN
