SUMMARY

Backend engineer specializing in **distributed systems, real-time architectures, and performance optimization**. Experienced in designing scalable APIs and event-driven systems. Proven track record of improving system efficiency, reducing latency, and delivering reliable, production-grade systems with strong end-to-end ownership.

EXPERIENCE

Application Developer

Mar 2025 – Present

Deuex Solutions

Mumbai, IN

TypeScript, Node.js, PostgreSQL, Redis, WebSockets, Docker, AWS, OpenTelemetry, Grafana

- Designed and owned **scalable backend systems**, supporting 10K+ concurrent users and improving system reliability to 99.9% uptime.
- Engineered a **real-time commentary system** using WebSockets, reducing API calls by 60% and lowering latency by 40%.
- Re-architected **scoring and leaderboard systems**, cutting database load by 50% and improving response times by 3x.
- Optimized performance by eliminating redundant queries and memory leaks, reducing CPU usage by 30% and improving throughput.
- Implemented **Redis Pub/Sub** and caching strategies, improving response times by 35% and ensuring real-time consistency.

Associate Developer

Mar 2023 – Feb 2025

Nagarro

Gurugram, IN

TypeScript, React, React Native, Node.js, MongoDB, PostgreSQL

- Created a **large-scale BFSI mobile application** used by 50K+ users, ensuring reliable frontend-backend integrations and seamless user flows.
- Architected reusable **multi-mode React and React Native components**, reducing code duplication by 40% and accelerating feature development.
- Boosted **API design and data flow**, improving response times by 25% and contributing to backend fixes and database design (MongoDB, PostgreSQL).
- Enhanced performance and scalability by implementing **caching, state management, and multi-language support**, reducing redundant API calls by 35% and expanding accessibility.

PROJECTS

Scalable Notification System

Go, Redis, PostgreSQL, Docker

- Composed a **distributed notification system** using Redis-based queues and worker services for asynchronous processing.
- Built **rate limiting and horizontally scalable workers** to improve stability under high load.
- Implemented **retry logic, dead-letter queues, and idempotent processing** to ensure reliability under failures.

Real-Time Event Processing System

Node.js, Redis Streams, PostgreSQL, WebSockets

- Built a **high-throughput event-driven system** for real-time data ingestion and processing.
- Designed **event bus architecture with partitioned consumers** using Redis Streams for scalable processing.
- Enabled **stateful aggregation and real-time broadcasting** with WebSockets for low-latency updates.

SKILLS

Languages: Go, JavaScript, TypeScript, Python, Java, SQL

Frameworks: Express, FastAPI, REST APIs, WebSockets, Redis, React, React Native, Next.

Databases: PostgreSQL, MongoDB, MySQL

Tools & Concepts: Docker, AWS, OpenTelemetry, CI/CD, Event-Driven Architecture, Caching, Distributed Systems

EDUCATION

B.Tech in Computer Science

Aug 2019 – Jul 2023

Rajiv Gandhi Proudyogiki Vishwavidyalaya

Bhopal, IN
